

ICBKT-WA-4200 In-Ceiling Bracket for the WA-4200 Access Point

INSTALLATION GUIDE

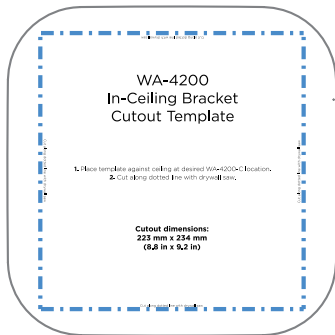

WA-4200 In-Ceiling Bracket

This bracket allows recessed mounting of the WA-4200 access point.

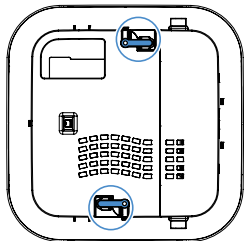

Package contents: WA-4200 bracket, cutout template, *Quick Start Guide*

Installing the bracket

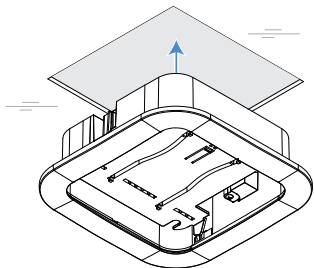

- 1 Remove the backing from the included cutout template and affix it to the ceiling where the AP will be installed.

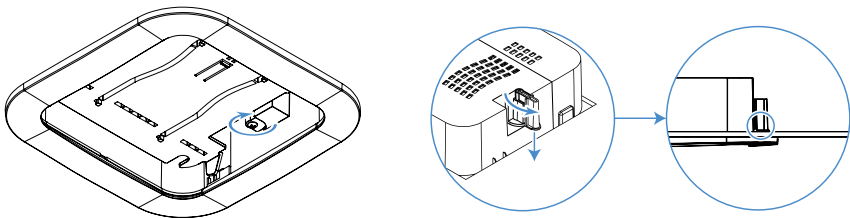

- 2 Use a drywall saw to cut along the template's dotted line, then fish the PoE Ethernet cable from inside the ceiling so it's easy to grab when mounting the bracket.
- 3 Hold the bracket near the mounting hole, then feed the Ethernet cable through the cable opening.
- 4 Make sure that the in-ceiling bracket's mounting latches are in their closed position.

- 5 Insert the in-ceiling bracket into the opening you created in step 2.

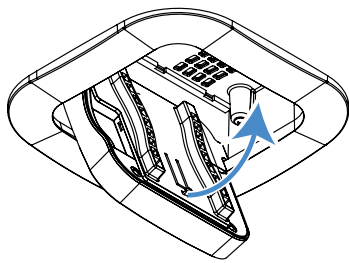

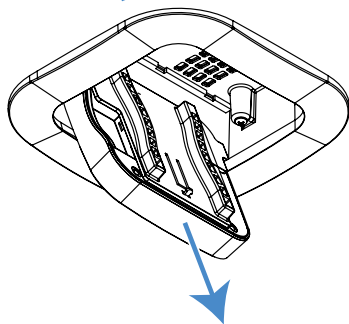

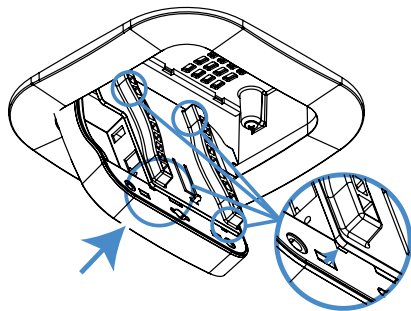

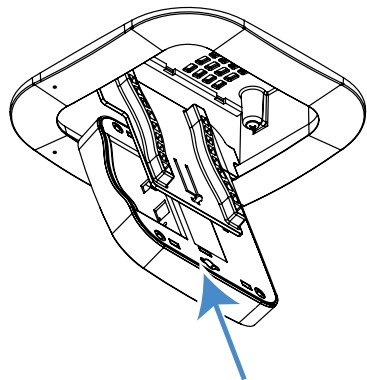

- Using a Phillips screwdriver, press each spring-loaded dogleg lever in, then 1/4 turn clockwise until the lever is perpendicular to the bracket edge, then release it. The spring-loaded doglegs hold the bracket securely in place.

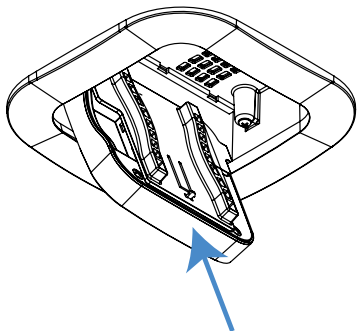

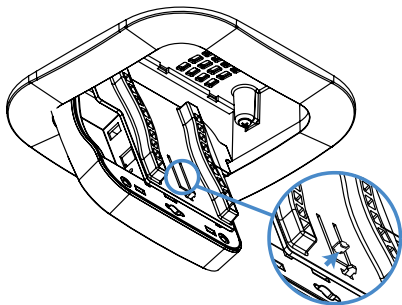

Mounting into the in-ceiling bracket

- Connect the Ethernet cable to the Ethernet port on the AP, then slide the AP into the bracket's swivel door until it locks into place.
- Press the AP into the bracket until it clicks into place.
- To mount the AP into the bracket, see the visual guide on the following page.

Removing the AP from the in-ceiling bracket

- 1** Push the AP into the bracket to release the swivel door.
- 2** Pull the swivel door's center tab with your thumb, toward the bracket, then push the AP toward the bracket.
